

Enlist™ Best Practices

Start clean with tillage, a burndown or a soil residual herbicide.

Tank-mixing Enlist Herbicides

Start with a clean sprayer that has been triple rinsed to avoid contamination from previous herbicides

Start by filling tank ½ full with water and start agitation

For Enlist 1 and high load glyphosates, add them one at a time and allow to properly recirculate before adding the next one.

Add products in the following order:

- Dry formulations first
- AMS (if using Liberty® 200 SN)
- Enlist Herbicides: Enlist™ 1 at 0.73 L/ac or Enlist Duo™ at 1.74 L/ac
- High load glyphosate or Liberty® 200 SN
- Graminicide
- Adjuvants (if required)
- Fill with remaining water

Application Information:

Nozzles: Select nozzles such as Tee-Jet® AI XR that deliver Coarse, Very Coarse or Extremely Coarse spray droplets. Avoid nozzles that produce Ultra Coarse droplets

Pressure: Maintain appropriate pressure for your selection of nozzles/speed/volume

Volume: 10 – 15 gal/ac. For Enlist 1 + Liberty 200 SN use 20 gal/ac

Weed size: Less than 10 cm (4 inches).

Crop Stage: Enlist™ herbicides: from before planting through R2 soybean growth stage on Enlist E3™ soybeans.

Time of Day: Begin after dew has lifted and finish 1–2 hours before sunset.

Weather: No temperature restrictions. Best results during warm sunny weather.

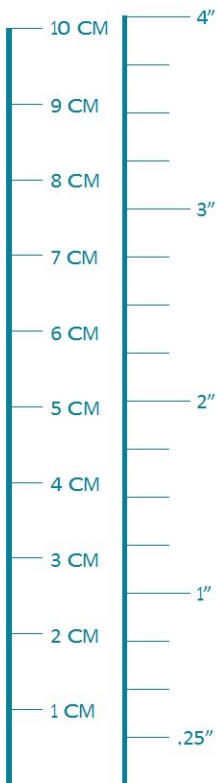

Wind: 3–16 km/h but no more than 25 km/h. Avoid spraying between dusk and dawn to avoid temperature inversions.
